

Counting and Measuring with Lego.

For this simple activity, you can use Duplo or large pieces of Lego.

Write numerals from 1-5 or 1-10 on the side of them, using a permanent marker. On another face of each Lego piece, draw the corresponding number of dots so that they count them to match the correct amount.

Then you can lay them out on the floor with the numbers showing. Set the challenge to make a tower sequencing numerals in the right order.

Great for recognising numbers, ordering and measuring in a hand on playful way. They can use their tower to measure things around the house.

You can make towers of five and extending to ten or even twenty!

Measuring body parts
