

## Science - Does it break easily?

This week we are going to remind ourselves about what things are

Made of and think about if they can break easily.

Look around your house can you find objects which are:

Wood

Plastic

Fabric

Glass

Describe them to an adult use words like; hard, soft, squashy and bendy. Mmmm look what happened to my glass at home when I dropped it (don't try this at home!)

Which of the objects you collected would break easily talk about this with your adult.

Draw the object that would be broken easily. Lots of things break but which would be the easiest to break? Tell your adult why.

(Teaching point: to classify different materials and what they are made of, to know what breakable is.

### Send us on Dojo:

Photos or a drawing of the object your think will easily break. Write down what it is made of, is it wood, plastic, metal or glass?
