

SCIENCE - PHYSICS

RECAP: ELECTRICITY

- Electricity is an **energy**.
- This energy can be used to power electrical items such as toasters, kettles, cookers, televisions and computer tablets.
- Electricity is man-made and is transported along wires and cables to houses, schools and buildings. Have you see electricity pylons?

- Electrical energy is moving about to make a current, which moves inside wires.
- Electricity can be stored in batteries.

ELECTRICITY

- Find different objects in your house that need electricity to power them.
- Write a list of them.

- Extension- Think about your classroom. Which objects in there need electricity to make them work.
