

The Usborne Encyclopaedia of Ancient Egypt

Phase 2 Day 10

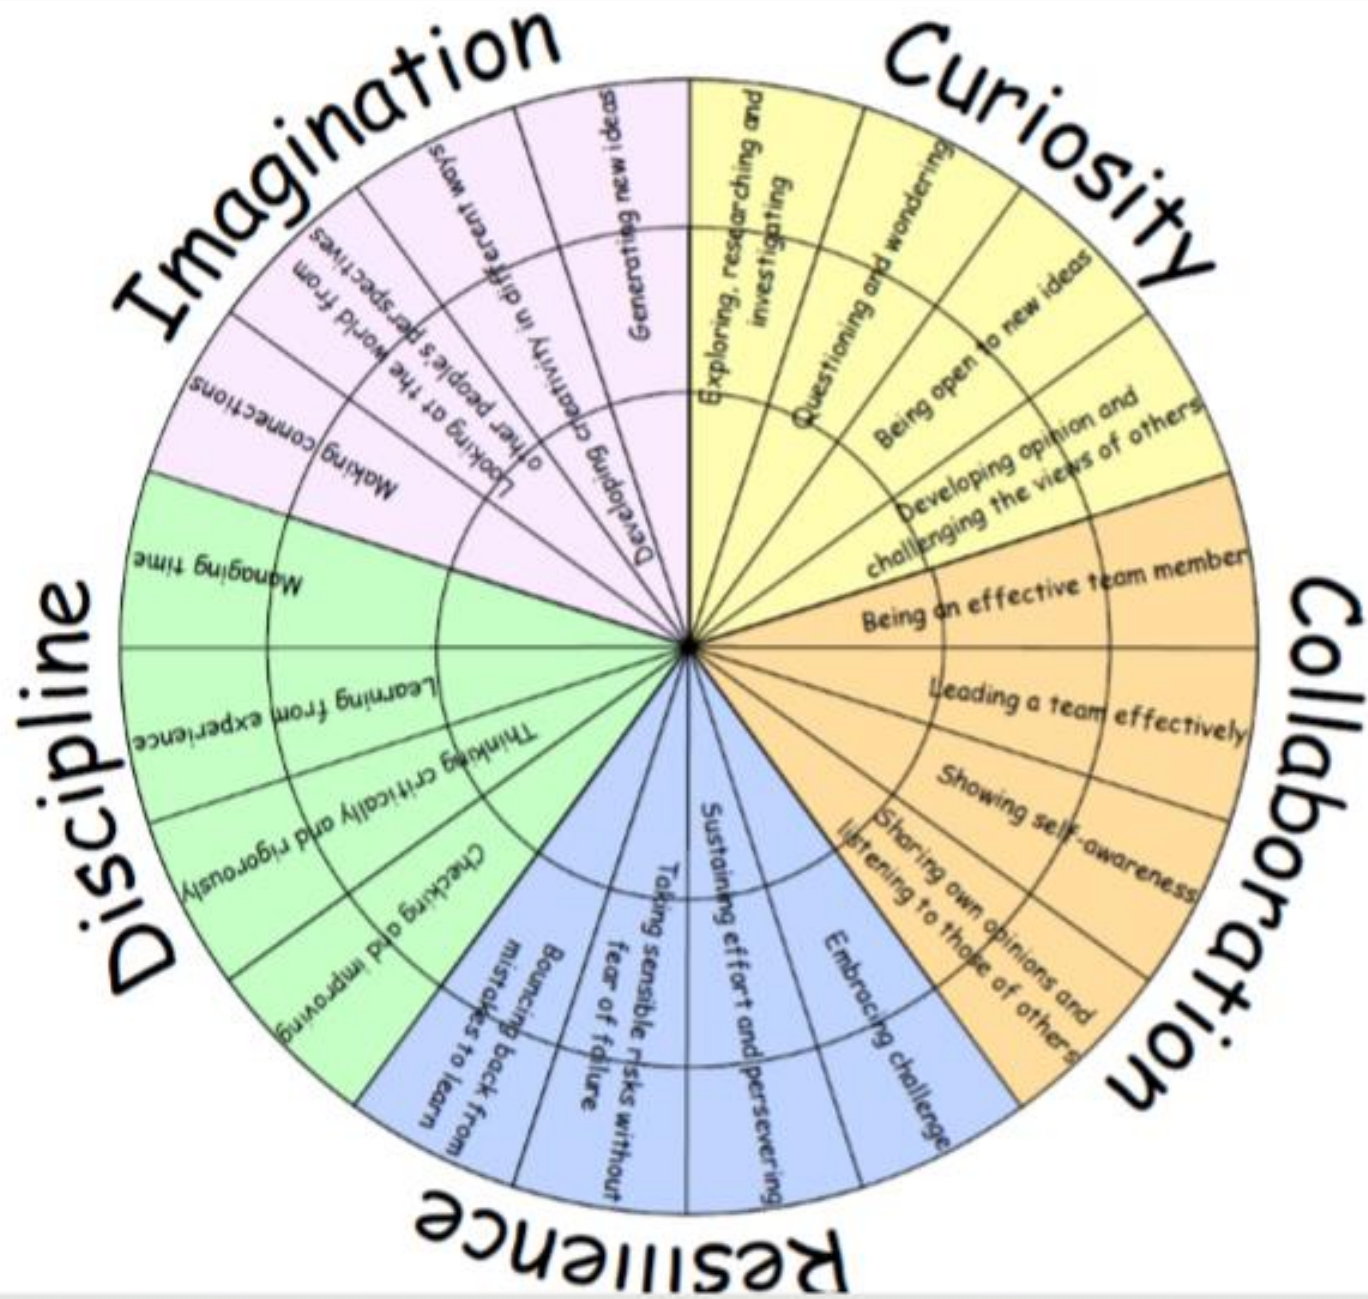

By Gill Harvey and Struan
Reid

LEARNING LADDER AND SKILLS:

- **Decoding-** I can use the context of the sentence to help me to read unfamiliar words.
- **Decoding** - I can use knowledge of root words, suffixes and prefixes to read/understand new words.
- **Decoding** - I can read out loud confidently, understanding how to use a range of punctuation.
- **Responder** - I understand why a writer has written a text.
- **Language Lover** - I can discuss/clarify the meanings of words, linking new meanings to known vocabulary.
- **Comprehender** - I can identify the features of different text types.
- **Comprehender** - I can use a range of organisational features to locate information, such as labels, diagrams and charts.

SKILLS:

- Decoding the text
- Understanding the content
- Collaborating
- Improving

LEARNING HABITS:

Which learning habits do you think we will need to use today?

RECALL:

Speed read for 1 minute. When doing this look at all the words in the text. Are you getting quicker?

EMBALMING AND MUMMIES

The embalming process, which prevented bodies from rotting away, was perfected over hundreds of years. If it was done properly, it was a lengthy, messy and gruesome job, but it did work.

THE NEW KINGDOM METHOD

Mummification took 70 days altogether. First, a slit was made in the side of the body so that the 'viscera' – the intestines, lungs, liver and stomach – could be taken out. The viscera were embalmed separately and placed in four 'canopic jars' (see opposite). The heart was left in the body, because Egyptians believed it would be judged in the Next World.

The body is cut open and the internal organs taken out.

Next, the embalmers covered the body with a salt called natron, a preservative that also soaked up the moisture. After about 35–40 days, the body was completely dried out. Then it was stuffed with materials soaked in oils and resins to make it a normal shape again, and the slit was sewn up.

Embalmers covering the body with natron.

The body now had to be wrapped in layers of linen, starting with the fingers and toes.

Seti I's amazing mummy shows the effectiveness of the New Kingdom method of embalming.

Many New Kingdom mummies are still in amazingly good condition today. After the New Kingdom, standards waned, but bodies were still mummified until beyond the time of the Ptolemies.

Jewels and amulets (charms) were placed between the layers, to protect the person in the next life, and each layer was covered in oils, resins and perfumes, too.

The wrapping of the mummy is almost finished.

Finally, a mask was placed over the mummy's head. This was done by the chief embalmer, wearing the jackal mask of the embalming god Anubis. At last, the mummy was ready to be put in its coffin.

The chief embalmer says prayers over the completed mummy.

Over time, the oils and resins used in the wrapping stage became thick and sticky, almost like tar. The local word for this substance was *mumija*, meaning 'bitumen' (tar is made partly of bitumen). So, this is where the word 'mummy' comes from.

This is the mummy of Seti II, Ramesses II's grandson.

The mummy has been unwrapped. You can see how thin the arms and legs were when they were dried out.

Internet links: For links to websites where you can prepare a mummy for the website and see X-ray images of mummies, go to www.ishorne.quicklinks.com

CANOPIC JARS

There were usually four canopic jars with each mummy, containing the mummified liver, lungs, stomach and intestines. Each jar had a different stopper, in the form of one of the four sons of Horus, who protected the viscera.

These are typical New Kingdom canopic jars. Hapy, a baboon, protected the lungs. Qehesunet, a falcon, protected the intestines. Duamutef, a jackal, protected the stomach. Hensy, a human, protected the liver.

MUMMIES REVEAL THEIR SECRETS

In the 19th century, mummies were often unwrapped so that investigators could inspect them. Later, it was recognized that this practice damaged them badly, so it was stopped. Now, when scientists want to find out about a mummy, they put it into a CAT scanner, which sees through all the bandages. They can also carry out tests on tiny scraps of mummy flesh to find out

about their DNA, the unique blueprint that each of us has in our cells. For example, DNA tests have shown that Tutankhamun and the body found in KV55 (see page 28) were definitely related.

Modern technology: below, a wrapped mummy inside a CAT scanner. Right, images of mummies' faces, reconstructed by a computer.

BLUEPRINT FOR THE NC REPORT:

STEP	CONTENT	FEATURES
Step 1	Think of a catchy title and three succinct subheadings	<ul style="list-style-type: none"> • Large-sized, capital letters - title. • Medium-sized, underlined, capital letters of subheadings.
Step 2	Add factual information beneath each subheading.	<ul style="list-style-type: none"> • Factual information • Historical vocabulary (brackets) • Subject-specific language • Third person (Tutankhamun, he, the body, his mummy) • Fronted adverbials for sequence
Step 3	Present information in different ways	<ul style="list-style-type: none"> • Detailed diagrams • Short descriptive sentence for caption • Words for labels • Images (sketches, hieroglyphics, photographs) • WOW fact box/ Did you know....?

Today, we will be looking at writing in the **third person** and how to use it in our report.

The term 'third person' refers to someone else - not the writer or a group including the writer.

Whenever we include a noun (object, place or name) in our writing, it is written in the third person.

EMBALMING AND MUMMIES

The embalming process, which prevented bodies from rotting away, was perfected over hundreds of years. If it was done properly, it was a lengthy, messy and gruesome job, but it did work.

THE NEW KINGDOM METHOD

Mummification took 70 days altogether. First, a slit was made in the side of the body so that the 'viscera' - the intestines, lungs, liver and stomach - could be taken out. The viscera were embalmed separately and placed in four 'canopic jars' (see opposite). The heart was left in the body, because Egyptians believed it would be judged in the Next World.

The body is cut open and the internal organs taken out.

Next, the embalmers covered the body with a salt called natron, a preservative that also soaked up the moisture. After about 35-40 days, the body was completely dried out. Then it was stuffed with materials soaked in oils and resins to make it a normal shape again, and the slit was sewn up.

The body now had to be wrapped in layers of linen, starting with the fingers and toes.

Many New Kingdom mummies are still in amazingly good condition today. After the New Kingdom, standards waned, but bodies were still mummified until beyond the time of the Ptolemies.

Jewels and amulets (charms) were placed between the layers, to protect the person in the next life, and each layer was covered in oils, resins and perfumes, too.

The wrapping of the mummy is almost finished.

Finally, a mask was placed over the mummy's head. This was done by the chief embalmer, wearing the jackal mask of the embalming god Anubis. At last, the mummy was ready to be put in its coffin.

The chief embalmer says prayers over the completed mummy.

Over time, the oils and resins used in the wrapping stage became thick and sticky, almost like tar. The local word for this substance was *mumysa*, meaning 'bitumen' (tar is made partly of bitumen). So, this is where the word 'mummy' comes from.

Seti I's amazing mummy shows the effectiveness of the New Kingdom method of embalming.

This is the mummy of Seti I, Ramesses II's grandson.

The mummy has been unwrapped. You can see how thin the arms and legs were when they were dried out.

CANOPIC JARS

There were usually four canopic jars with each mummy, containing the mummified liver, lungs, stomach and intestines. Each jar had a different stopper, in the form of one of the four sons of Horus, who protected the viscera.

These are typical New Kingdom canopic jars. Hapy, a baboon, protected the lungs. Duamutef, a jackal, protected the stomach. Qehmusem, a falcon, protected the intestines. Hery, a human, protected the liver.

MUMMIES REVEAL THEIR SECRETS

In the 19th century, mummies were often unwrapped so that investigators could inspect them. Later, it was recognized that this practice damaged them badly, so it was stopped. Now, when scientists want to find out about a mummy, they put it into a CAT scanner, which sees through all the bandages. They can also carry out tests on tiny scraps of mummy flesh to find out

about their DNA, the unique blueprint that each of us has in our cells. For example, DNA tests have shown that Tutankhamun and the body found in KV55 (see page 28) were definitely related.

Modern technology: below, a wrapped mummy inside a CAT scanner. Right, images of mummies' faces, reconstructed by a computer.

Look at the paragraph below.

Finally, a mask was placed over the mummy's head. This was done by the Chief Embalmer, wearing the jackal mask of the embalming god Anubis. At last, the mummy was ready to be put in its coffin.

IDENTIFY

Read this paragraph from the report.

1. What do you notice about how the author has introduced the mask ?
2. Did they use long, detailed descriptions?
3. Did he explain how carefully it was placed over the mummy's head?
4. Does the text explain why the Chief Embalmer is wearing a jackal mask?
5. Why is the mask worn to mummify the body?

EXAMINE

- The mummy has been unwrapped.
- You can see how thin the arms and legs were when they were dried out.
- Mummification took 70 days altogether. First, a slit was made in the side of the body so that the internal organs can be removed.

Now look at this extract from the report.

What words have been used to show third person in the first example?

Yes. It was **'The mummy'**.

Now, words have been used to show third person in the second and third example?

1. The mummy

2. _____

3. _____

Marvellous Mars

Introduction

Have you ever wanted to find out more about the Red Planet, Mars? If so, this is the report for you!

Mars from Space

Appearance

Mars is often called The Red Planet because of its colour. Interesting, it is a special mineral on the planet's surface that causes this colour. Mars' surface is covered in towering mountains and deep craters caused by crashing asteroids and meteorites.

Size

Mars is the second smallest planet in our solar system. It is half the size of the Earth. However, because Mars is a desert planet it has the same amount of dry land as the Earth.

Look at this non-chronological report all about Mars.

Read the text before writing down your answers.

Identify all the **third person** words or phrases.

1. Mars is....
- 2.
- 3.
- 4.
- 5.
- 6.

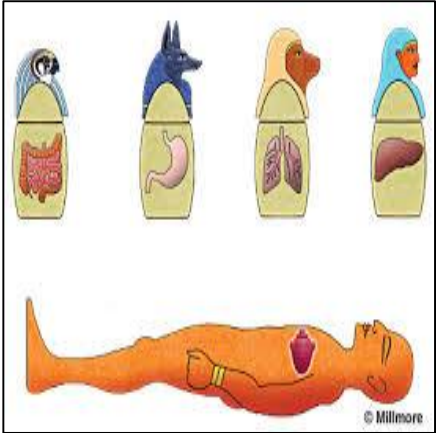

PRACTISE

Writing in the third person helps to keep the report factual, to the point and interesting to reader.

Information is summarised, so that it's easy to read.

APPLY THE FEATURE

Look at the following objects. Describe what the object is or what is happening in the diagram.

Third Person

he / his / him
Her / hers /
she
she it
him
it its/its

It is...

In the 19th
century...
