

Science - Physics

Lesson 7 -

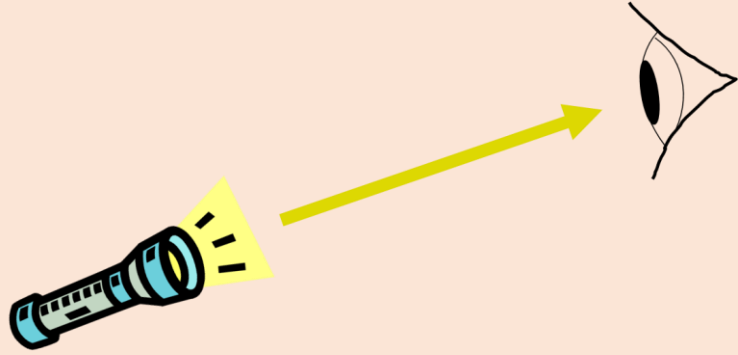

Light and Reflection

Recall:

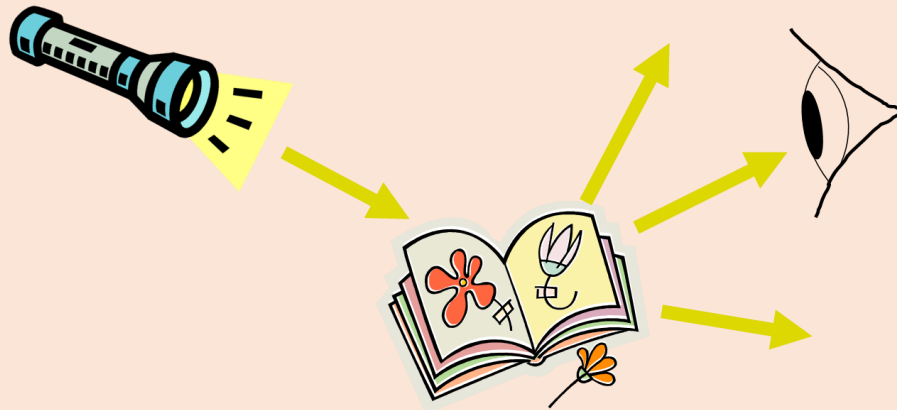

Write down 3 examples of:

- 1) Man-made sources of light
- 2) Natural sources of light.

How do we see light sources? Look at the picture and write down your own explanation.

How do we see things that are not sources of light? Look at the picture and write down your own explanation.

Watch the video and write down what the problem was?

Why did he have an accident?

What did Winkie do wrong?

Write down possible solutions to his problem.

Prepare for tomorrow's light experiment.

Prepare following resources for tomorrow's scientific experiment you are going to do at home:

A torch, a sheet of white paper, different colour paper, tin foil, shiny paper (can be a shiny cover of a book), different colour fabric (socks, hats, T-shirts), wood (painted and not painted), cardboard, a mirror.

If you can't find some of the resources, don't worry. You can replace them with something else.
