

Explosive Experiments

Horrible Science

Nick Arnold

From these experiments you should now know: some materials will dissolve in liquid to form a solution and we can recover (get back) some of these materials. So, if you happen to turn your freezer off by mistake, don't panic. Even if all the ice melts, it is a reversible change. This is just one of the many horribly amazing facts that you have learnt from conducting these experiments.

We can't be sure what scientists will discover next and which experiments will produce great discoveries. But one thing is certain: experiments are the most powerful method humans have ever devised for solving the mysteries of life, the world and the universe. Scientists will never explain everything because a good experiment highlights new questions that need to be answered by - yes, you guessed it - more experiments! Science is an endless journey into the unknown. Experiments are like lamps, which show the way further and further into the dark. And if you think that sounds horribly frustrating and horribly mysterious, you're right. It is. But it's also horribly funny.

Here's a final piece of horribly funny advice from our experts. Have you ever had a secret urge to pick your nose? You probably already eat enough of it! Every day you swallow over two cups of snot. I prefer a nice cup of tea myself.

Recall:

What is a plan?

For this piece of writing what do we need to include on our plan?

LO: Create a plan

Which learning habits do you think we will need to use today?

What are you going to change?

	Content	Features	What are you going to change?
1	Scientific fact from the findings of the experiment (zoomed in)	<ul style="list-style-type: none">- Colons used to tell the reader that an explanation will be given, which makes complicated sentences easier to understand- Sentences with facts- Brackets to explain technical language- Simple and funny with ambitious vocabulary, which makes the reader learn new words as well as laugh and remember the text	Change the wording or change the experiment (use one that we did before the Christmas holiday).
2	General summary (zooming out from the experiment to focus on science in general)	<ul style="list-style-type: none">- Sentences with facts and opinions- Informal (style) phrases- Dashes to include extra pieces (informal phrases)	Think of your own informal phrases Think of a different word to horribly - don't forget, you still want to make the reader laugh.
3	Advice/joke - leave the reader wanting more, excited about science	<ul style="list-style-type: none">- Rhetorical question and humour	Come up with your own exaggerations (jokes) - make sure they're based on a fact and not too silly!

First, look at your blueprint.

Then have a go at creating a plan.

Include pictures and words/phrases.

Don't write sentences!
