

**Wow! We have changed!**

**Explore Term Science**

**Week 6**

# What are we learning today?

## Understand

*Identify, name, draw and label the basic parts of the human body and say which of the body is associated with each sense*

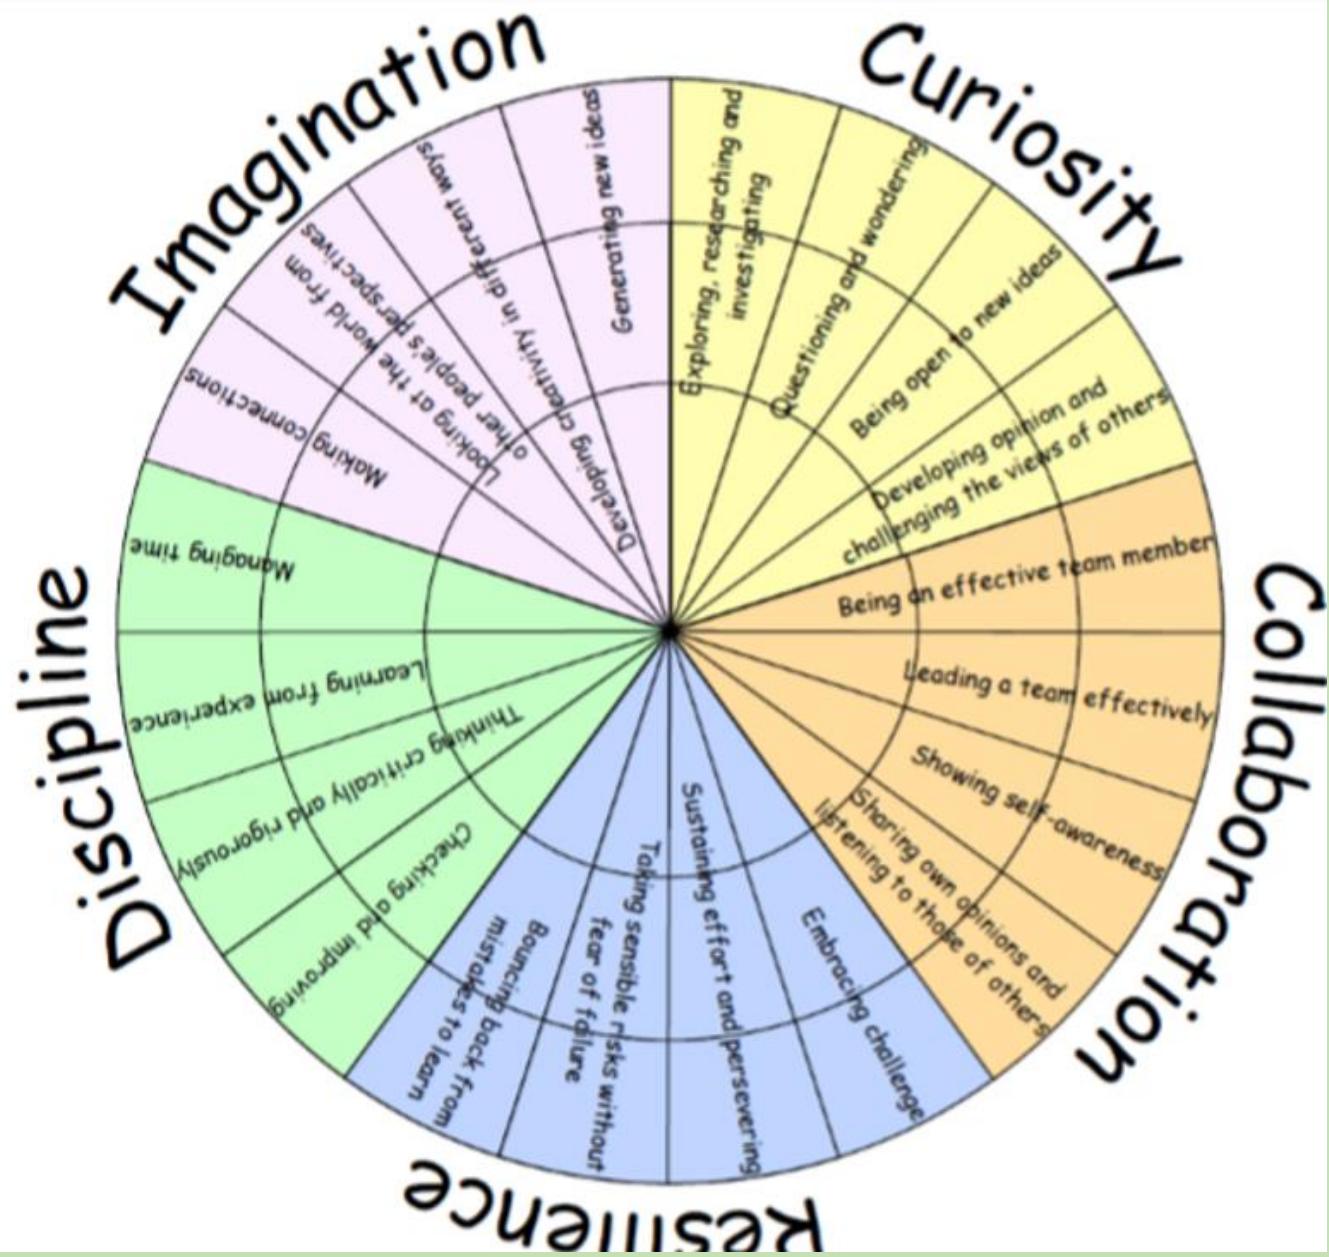

*That humans have offspring that grow into adults.*

## Learning objectives:

*Name parts of their bodies and collect information about their bodies by observing, measuring and noticing patterns.*

## Skills:

- *Observe*
- *Describe*

## LEARNING HABITS:

Which learning habits do you think we will need to use today?

# Parts of the Human Body

nose

mouth

ear

eyes

hand

Let's have a look at some more body parts. Follow the link below to find out more about the human body and to test your knowledge about body parts.

Here's a question for you:

*Do people with bigger hands need larger gloves?*

Grown-up scientists often have times when they discuss lots of things before deciding what to do.

We are thinking like scientists so we have to think about our question and talk to each other. Then we need to make a prediction.

If you 'predict' something, it means you say something that you think will happen.

Scientists predict things after they have thought hard and talked to each other about what is likely to happen.

So, can you predict what the answer is going to be?

*Your task now is to measure your hands and feet.*

What could you use to measure?

Maybe you could use objects around the house?

Or maybe you could use a ruler or a measuring tape?

## TALKING TIME:

Share one thing that has surprised you

Share one thing that you have learnt
